HISTORIC AMERICAN BUILDING SURVEY

CRISPUS ATTUCKS ELEMENTARY SCHOOL

Location: The former Crispus Attucks Elementary School building is located at 3808 - 3812 S. Dearborn Street, Chicago, Illinois 60609.

Latitude: 41.825296
Longitude: -87.627629
Locational Data Source: U.S. EPA FRS Facility Detail Report

Former Owner: Chicago Public Schools
Present Owner: Chicago Public Schools

Present Use: Building was abandoned by CPS and is currently vacant.

Significance:

The Crispus Attucks Elementary School, named for the African American Revolutionary War hero Crispus Attucks, is located at 3808-12 S. Dearborn Street in Chicago. Designed in 1957 during a period of significant expansion of Chicago Public Schools elementary schools due to the post-World War II "baby boom" and the *Great Migration* population explosion, the school was built to accommodate the Stateway Gardens public housing project. As influenced by progressive ideals that are represented in both plan and program, the school's architects embraced these modern design theories to connect the school with the surrounding community.

   - Plumbing: Bertocchi Plumbing, Inc.
   - HVAC: Ortiz Mechanical
   - Electrical: Airport Electric
   - Asbestos Abatement: Luce Asbestos Removal Co.

B. Historical Context

1. Introduction and Background

The Crispus Attucks Elementary School was purpose-built as an elementary school for children for the soon-to-be-built Stateway Gardens public housing project in Chicago. Built in 1957, Crispus Attucks School was one of many schools built by the CPS in the post-World War II-era which demonstrated progressive ideals in school design and academic theory. The school was designed by Fugard, Burt, Wilkinson & Orth, a prominent architectural firm from Chicago, known for many educational and institutional designs.

In 1955 the Chicago Board of Education purchased 39 parcels of property located in the block bounded by W. 38th Street, W. Pershing Road, S. State and S. Dearborn Streets to make room for the school building.[1] On December 14, 1955, the CBOE approved settlements with those property owners and on February 29, 1956, the Chicago Board of Education voted to award a contract to the State Wrecking Company, Inc. to demolish all of the buildings on those properties for the school site.[2] The Board also voted to approve closure of a 16-foot public alley lying in the block bounded by W. 38th Street, W. Pershing Road, S. State and S. Dearborn Streets to make the school property contiguous.[3] Construction costs were estimated at $1,200,000.00 with an architectural fee of 5 1/4% of costs.[4]

On March 4, 1956 the *Chicago Tribune* announced that the Chicago Board of Education would build two new elementary schools and an addition to an existing school on the South Side of Chicago to accommodate future residents of two new Chicago Housing authority projects, including Stateway Gardens and a proposed project to be built at 50th Street and Cottage Grove Avenue. According to the article, the Crispus Attucks Elementary School would cost $1,500,000. Designed by Fugard, Burt, Wilkinson and Orth, the school would consist of 40 classrooms, a gymnasium and cafeteria and would accommodate 1600 pupils.[5] On July 25, 1956 the Board of Education approved preliminary plans for the school building and on October 10, 1956, the Board approved the final plans and specifications for the school building. The original plans submitted by Fugard, Burt, Wilkinson & Orth were memorialized in a letter from Benjamin C. Willis, General Superintendent of Schools to

Fugard, Burt, Wilkinson & Orth. The architects estimated the building would be 74,292 square feet at a cost of $16.15 per square foot, and an estimated 1,004,000 cubic feet at a cost of $1.19 per cubic feet, for a total cost of approximately $1,200,000.00. Capacity was estimated at 1,715 pupils.[6] On that same date an entry was made in the Chicago Board of Education Bureau of Architecture Logbook that noted the name of the school and the architectural firm that was awarded the contract to "complete [the] new building."[7]

On October 12, 1956 bids were sought for general construction, heating, plumbing, ventilating and electric. Sealed proposals were to be sent to the City of Chicago Board of Education and plans and specifications were available at the office of Fugard, Burt, Wilkinson and Orth, architects, 520 N. Michigan Avenue in Chicago.[8] The *Chicago Tribune* reported on November 11, 1956, that the Board of Education was expected to award contracts for construction of two schools, Crispus Attucks and Reavis School. According to the article, most of the students of Attucks school were expected to come from Stateway Gardens which was under construction, but due for occupancy in January, 1958. Attucks was also expected to relieve pressure on the overcrowded nearby schools: Raymond, Abbott and Hartigan.[9] Attucks would have 37 classrooms, including three kindergartens, a gymnasium, an auditorium, a lunchroom, kitchen, library and offices and would be steam heated. [10]

On November 14, 1956 the general contractor and subcontractors were approved by CBOE. Joseph J. Duffy was approved as general contractor, and S. J. Reynolds Co., Wadeford Electric Co., Gazin & Valentine and Steel City were approved as subcontractors for heating, electrical, plumbing and ventilation, respectively. The building called for three kindergartens, 39 classrooms, one industrial arts shop, one home-making shop, one library and two gyms.[11] Original plans called for a two-story "U-shaped" masonry building with an open courtyard on the east side. The design called for three "units" – a south unit, a center unit and a north unit.

Aware of future needs of the growing population, the architects also planned for an addition at the south west side of the building, but an addition was never built. In 1965 the school had 37 classrooms, a gym, auditorium, lunchroom and kitchen, a library and

[11] November 14, 1956 Meeting, Proceedings Board of Education City of Chicago Vol. I July 1, 1956 – December 12, 1956: 529.

administration offices. The school also had industrial-arts and science facilities, a home-arts department with four full kitchens, 14 sewing machines, and a clothing washer and dryer.[12]

On June 26, 1957 the General Superintendent of Schools recommended that the building be opened on September 2, 1957 because the contractor reported that a portion of the school including twelve classrooms and three kindergartens would be ready for occupancy on September 1, 1957.[13] Mary Jane O'Shea was approved as the first principal at Attucks School.[14]

In August of 1957, the CBOE approved the firm of Fugard, Burt, Wilkinson & Orth to prepare architectural, engineering and landscape design services for site development of the school property, including preparation of plans and specifications, and supervision of work for grading, landscaping, walks, drives and parking areas that weren't covered in the original construction contract, and playground development in accordance with the "Hitch Plan," including soil stabilization, blacktop, fencing and play yard equipment. Estimated site development costs were $30,000,00; Fugard's fees were 4 ½% of that estimate, or $1,350.00.[15] Landscaping improvements didn't take place for several years.

On April or September 22, 1960 (the entry is illegible) and again on January 2, 1963 "Yard Improvements "were noted in the CBOE Bureau of Architecture Logbook, although the details are unknown.[16] In June of 1961 a request was made for repair of cracks in concrete block walls. Some cracks were so deep it was possible to see through the walls, and other cracks were at corners above the walls which appeared to be dangerous.[17]
On April 23, 1963 CBOE awarded a contract to the Standard Grading & Construction Co. for "grading and leveling, concrete work, bituminous yard, stabilized area, sodded lawns, wood curbing, trees and shrubs, etc.," and to the Playground & Park Equipment Sales Co. for "Fences, etc."[18]

The Completed Crispus Attucks Elementary School

The school was designed to meet the unique needs of the neighborhood. Completed in 1957 during the height of the Modernist design movement, the Crispus Attucks Elementary School is emblematic of those idealistic progressive principles. The massive public housing complexes in the area, such as Stateway Gardens, required access to schools that were substantially larger than average.

These communities also lacked the typical amenities common in traditional neighborhoods. To fill this void, the school featured spaces that could serve the needs of both school-aged children and the surrounding community. Amenities that could be utilized by the local community such as the gym, library, and industrial arts classrooms were located at the north end of the building near the Chicago Park District park and Stateway Gardens. As further evidence that the school was a critical fixture of the surrounding community, additional services such as camping events, evening school, Head-Start and summer school programs began at the school in 1965.[19] The school's north unit provided easy access to the park north of the school and to Stateway Gardens.

By 1967, the school had become overcrowded and the Board of Education approved five mobile classrooms to ease overcrowded classrooms. In that same year a Social Center was established at the school due to the "lack of existing recreational facilities and programs, a study of the sociological factors such as population density and juvenile delinquency, the adaptability of the school facilities to this type of program, interest on the part of lay citizens for the community, and the comments of the principal and engineer."[20] At the same meeting, the Board approved a contract awarded to O'Hara Decorating Service, Inc. in the amount of $7,840.00 for interior painting.[21] In May, 1967 the school was approved for the first time as a Summer Social Center to operate a Social Center Recreational Program.[22]

The school remained an important fixture in the community into the 1990s. In 1994, the Public Building Commission voted to approve rehabilitation projects at Crispus Attucks school, along with 26 other schools. The firm of Fajardo & Fajardo Ltd., architects and engineers, was hired to oversee the project at the school.[23] After consultation with the

architects, the Public Building Commission of Chicago awarded the bid for general rehabilitation work to Certified Midwest Construction, Inc., of Berwyn, Illinois. Work performed included replacement of exterior doors with new veneer wood doors and hollow metal frames; installation of finish hardware and weather stripping; replacement of a boiler complete with all accessories; repair of vacuum pump, steam traps, chemical feed and condensate pump; replacement of lighting fixtures for all classrooms and locker rooms on the first floor; replacement of lighting fixtures in toilet rooms and corridors on both floors, with salvage of the removed light fixtures for repair or relamping of fixtures on the second floor; and replacement of acoustical lay-in ceiling panels into existing metal suspended grid. Additional work included asphalt paving, fencing, playground equipment, building concrete, masonry, aluminum windows, glass and glazing, resilient flooring and painting, toilet partitions, windows shades, plumbing, HVAC and fire protection and electrical work.[24] No additions or major alterations were made to significantly change the original design or footprint of the building.

On June 21, 1994 the Public Building Commission of Chicago voted to award a contract for asbestos abatement, lead-based paint abatement & thermal reinsulation at Crispus Attucks Elementary School as well as seven other schools. Luse Asbestos Removal Co. was hired to perform the work.[25]

School Closure

In 2004 CPS closed Hartigan Specialty School, located at 8 W. Root Street, and Raymond Elementary School, located at 3663 S. Wabash Avenue, and students from Hartigan and Raymond were sent to Attucks. [26] Despite this, just four years later in July of 2008 Chicago Public Schools announced the immediate closing of the Crispus Attucks School building and relocation of the students to the vacant Farren School at 5055 S. State Street. Farren School was later re-named the Crispus Attucks Elementary School.[27] The former Crispus Attucks school building located at 3808 – 12 S. Dearborn Street was abandoned. Community members were told that Attucks was closed because it needed a new boiler; at a cost of $7 million, it was cost prohibitive. After Stateway Gardens closed, according to Andrea Lee, Grand Boulevard Federation education coordinator, "half the students no longer live[d] in

[26] "Chicago Public Schools Notice of Public Hearing on the Proposed Closing of Edward Hartigan Specialty School and Change in the Attendance Boundaries of Crispus Attucks School," Chicago Tribune, June 12, 13, 14, 2004.

[27] The second Crispus Attucks School located at 5055 S. State Street closed in 2016. https://www.publicschoolreview.com/attucks-elementary-school-profile/60609/ (accessed May 5, 2019).

the immediate area" and as a result of the closure of Stateway Gardens, Attucks School had the highest homeless population of any school in the city.[28]

The building stood vacant after it closed in 2008 and by 2013 it had deteriorated extensively. The Mayor of Chicago created a 13-member Advisory Committee for School Re-Purposing and Community Development to study how to re-purpose abandoned CPS buildings. Wilbur C. Milhouse III, founder and chairman /CEO of Milhouse Engineering and Construction, was chair of the committee, which also included alderman, community members and city officials.[29] The 2014 report the committee produced evaluated the second Crispus Attucks School located at 5055 S. State Street but made no mention of the school at 3808 – 3812 S. Dearborn. However, Milhouse said that he did not want a repeat of what happened to the former Crispus Attucks school located on Dearborn Street, which had been vacant and abandoned for five years at that point, saying "To have another school like that would be a failure for this committee."[30]

The building continued to remain vacant, and on November 8, 2018 a town hall meeting was held by the local alderman to notify the neighborhood of a land swap project involving the abandoned school building. The joint City of Chicago and Chicago Housing Authority construction project is intended to address the need to add commercial development to support the mixed-income housing development in the Bronzeville neighborhood, and involves property acquisitions and dispositions of a multi-block area bounded by West 37th Place to the north, South Federal Street to the west, West Fortieth Street to the south, and South State Street to the east. The property is vacant land except for the former Crispus Attucks Elementary School building. CHA is acquiring approximately 6.79 acres of City of Chicago vacant property located south of West 39th Street/West Pershing Road and disposing of approximately 6.8 acres of vacant property located north of West 39th Street/Pershing Road. The proposed land swap is occurring to facilitate commercial development on the approximately 11-acre site north of Pershing Road. The City of Chicago plans to construct a commercial development on this land including a grocery store. As part

of the proposed development, the unoccupied former Crispus Attucks Elementary School building will be demolished.[31]

Crispus Attucks Elementary School Building Salvage

Around 2010 Theaster Gates, an urban planner, performer, multimedia and American social practice installation artist and professor in the Department of Visual Arts at the University of Chicago salvaged materials from Crispus Attucks school, including chairs, chalkboards and other materials. Gates has used the salvaged materials in various art exhibits, including *See, Sit, Sup, Sip, Sing: Holding Court (*2019) at the Walker Art Center, and an exhibition for White Cube Art Gallery that ran concurrently at the White Cube Hong Kong and at the White Cube São Paulo galleries, which used artworks and materials from Gates' previous project entitled *12 Ballads for Huguenot House, realized for dOCUMENTA (13)* in Kassel, Germany, 2012. Gates has also repurposed a chalkboard and some other materials from the school in the basement of Black Cinema House and the Currency Exchange Café in the Washington Park neighborhood of Chicago.[32]

Gates was working with a fellow artist named John Preus, who was also contacted by CPS around 2010 and told that the Crispus Attucks Elementary School building would be demolished. By that point the school building had been being used to warehouse school district furniture and material. Along with Gates, Preus salvaged materials from the building and has used them to create artwork.[33]

2. Stateway Gardens

The site for Crispus Attucks Elementary School was in the middle of the largest collection of public housing projects operated by the CHA, known as the State Street Corridor. Stretched along a four-mile area east of the Dan Ryan expressway, the State Street Corridor included Stateway Gardens, the Robert Taylor Homes, Harold Ickes Homes, Dearborn Homes and Hillard Homes.[34]

Stateway Gardens consisted of a 33-acre area along State Street between 35th and 39th Streets in the Douglas Community. Two ten stories tall buildings adjacent to State Street

and six buildings of seventeen stories to the west, along the Rock Island Railroad tracks contained 1,644 apartments. Designed by Holabird & Root & Burgee, Stateway Gardens was completed in 1958. The buildings were constructed of box framed, reinforced concrete. Stateway Gardens may have been the largest development using this type of construction, which was more economical that traditional column and girder frame construction.[35] Crispus Attucks Elementary School was located on the southeast corner of the Stateway Gardens complex of buildings, immediately south of Chicago Park District Stateway Park.[36]

The Robert Taylor Homes were clustered in an area along State Street bordered by W. Pershing Road on the north, just south of the Crispus Attucks school. Designed by Shaw, Metz and Associates, the Robert Taylor Homes were built in 1962 and comprised 28 identical 16-story buildings, mostly in U-shaped clusters of three, and contained almost 4,300 apartments and 27,000 people. It was the largest public housing development in the country.[37]

Planning for the Stateway Gardens housing project included plans for a park and school. *Chicago Tribune* articles from 1955 and 1956 discussing the construction of Stateway Gardens specified that a public park and school would be incorporated into the site planning[38] and an unattributed drawing of the Stateway Gardens housing project indicates areas for the proposed park area and school at the southeast corner of the site.[39] Stateway Gardens was constructed between 1955 and 1958; the Chicago Board of Education began purchasing buildings to demolish for the school in 1955 and the school was built between 1956 and 1957; and in 1958 the Chicago Park District acquired the site just north of Crispus Attucks School for the park. Photographs in the Chicago Park District Archives of the Chicago Public Library from 1958 show the site of the park before construction with the built Crispus Attucks School in the background.[40]

Other photographs show day camps in 1961, a Halloween celebration in 1964,

The low, two-story school, adjacent to the park, was tucked into the corner of the site and somewhat removed from the apartment buildings. Classrooms looked out into park on the north, the east side open courtyard of the building, across to State Street, and 39th Street. The closest Stateway Gardens apartment building was a half block away at the southwest corner of the site on 39th Street and the railroad tracks.

From a design standpoint, the school complemented the cream brick of the apartment buildings, but the light brown brick and colorful terra cotta distinguished it. The school and the housing project were both Modern and severely rectilinear, with flat roofs and similar repeating simply punched fenestration.

Public housing deteriorated quickly in the 1950s and 1960s, due to building design flaws, poor maintenance, budget cuts and a changing socio-economic mix of tenants. Martin Luther King, Jr. attended rallies at both Robert Taylor Homes and Stateway Gardens and spoke at a rally outside of the Robert Taylor Homes on July 24, 1965 protesting discriminatory housing practices.[41]

Residents in the buildings experienced increasing violence and tragedies that ultimately led authorities to re-consider the design of high-rise buildings for low-income residents and families. Gangs exerted their influence and control over the buildings. CHA began closing and demolishing the Robert Taylor Homes in 2000 and Stateway Gardens in 2001.

In 1999 the Chicago Housing Authority began implementing a ten-year *Plan for Transformation.* Approved by US Department of Housing and Urban Development in February 2000, the Plan proposed redevelopment or rehabilitation of 25,000 units of public housing.[42] Part of the *Plan for Transformation* called for redevelopment of Stateway Gardens, which included demolition of the existing 1,644 units and development of mixed income off-site housing units called "The Pershing" and on-site units called "Park Boulevard" in various housing styles and construction. Residents of The Pershing and Park Boulevard would have access to a growing number of community amenities. The Chicago Park District would offer day camps and summer programming for adults and children at Stateway Park. The Illinois Institute of Technology is located near Stateway Gardens and

IIT representatives served on the Stateway Gardens Working Group. IIT offered financial incentives for staff and students who purchased new units in The Pershing and Park Boulevard.[43] To date, while only a fraction of the planned units for the State Street Corridor in Bronzeville have been constructed, a mixed-income apartment block at the corner of Pershing Road and State Street has been built across the street from the Crispus Attucks school building.[44] Redevelopment of the Stateway Gardens is anchored around a Pete's Fresh Market with parking spaces and public housing units.[45] Pat Dowell, Third Ward Alderman, held a townhall meeting on November 8, 2018 at Apostolic Faith Church and laid out redevelopment plans for the area.[46]

3. Modern School Design

Progressive school design in Chicago can be traced back to Dwight Perkins (1867 – 1941), who served as chief Chicago Board of Education architect from 1905 to 1910. During that time period Perkins designed or oversaw designs for dozens of elementary school buildings in Chicago, including Bernard Moos, Jesse Spalding, George W. Tilton, Grover Cleveland, Lloyd, George M. Pullman and Lyman Trumbull; technical schools, including Crane Manual High School, and the first Lane Technical High School; and high schools including Carl Schurz and Bowen.

Perkins was part of a progressive group of reformers who believed that schools should serve a wider purpose and Perkins's originative designs skillfully blended "the functionalism of the Chicago School with the social agenda and the aesthetics of the Arts and Crafts movement;" using natural colors of brick, minimal ornamentation, large banks of windows, and strong geometric planes.[47] On the interior, auditoria were placed on the first floor so they could be used by the community when school wasn't in session, hallways and stairways were widened, washrooms were located on every floor, and classrooms were positioned facing east or west to take advantage of natural sunlight.

While Perkins served as CBOE architect, he also planned a forest preserve system with his friend, landscape architect Jens Jensen; together they co-authored the 1904 *Report of the Special Park Commission to the City Council of Chicago on the Subject of A Metropolitan Park System,* which ultimately resulted in the formation of the Cook County Forest Preserve system.[48] Perkins was a member of the Special Park Commission and his interest in parks and landscape preservation efforts also resulted in his inclusion of open spaces and playgrounds around schools. [49] Perkins, along with friend Jane Addams and others, were part of the progressive *Playground Movement,* which advocated for construction of municipal and school playgrounds for the individual and collective health, physical fitness and educational benefits.[50] In terms of his school architecture, Perkins recommended larger setbacks, landscape improvements and sometimes as many as three playgrounds per school building.[51]

Progressive school design was continued by Dwight Perkins's son Lawrence. In 1935 Perkins and his classmate from Cornell University College of Architecture Philip Will, founded Perkins & Will as the successor firm to Perkins, Fellows and Hamilton, led by Lawrence's father Dwight. E. Todd Wheeler later joined the firm. In 1938 Perkins, Wheeler and Will received the commission to design Crow Island School in Winnetka, IL. The firm grew in the late 1940s and by the mid-1950s it had become one of the preeminent school-design firms in the country. Lawrence Perkins authored two seminal books on school design: "Schools," with Walter Cocking, in 1949, and "Workplace for Learning," in 1957. By 1960 the firm had designed 372 projects in 24 states and eventually grew to one of the country's largest architectural firms.[52]

Influenced by Mies van der Rohe, architects in the post-World War II-era in Chicago and elsewhere designed buildings that clearly referenced geometry and structure.[53] School

designs from this time period reflected the same influences; i.e., they were simpler, less monumental, and generally lower. These changes in design reflected architectural modernism, changes in educational theories and efforts to save on building costs. School architects rejected the typical monumental school prototypes with classical referencing in favor of low-story buildings with expansive windows and little, if any, ornament. Roofs were flat. In the interior, teacher-oriented classrooms with fixed rows of desks and chalkboards were disregarded and replaced with child-centered classrooms where children could move around freely, use furniture that could be easily rearranged, use materials other than textbooks, and view or have access to outdoor spaces.

Crow Island School, designed by Perkins, Wheeler and Will in collaboration with Eliel and Eero Saarinen, built in 1940, was notable for several innovations that made a significant impact on school design. The design of Crow Island was greatly influenced by Carleton Washburne, superintendent of Winnetka schools, and school teachers who collaborated with the architects on the plan for the school. The result was a design intended to not overwhelm children, but to make them feel at home and to encourage free and creative movement and learning. The architects sought to design the building around students' activities. The school district's progressive education was centered around developing its students' citizenship skills, individuality and emotional well-being through individual and group academic work and non-academic work.[54]

The school is a low-slung, one-story building with numerous garden spaces that divide and are accessible to individual classrooms. On the interior, space is divided into separate areas for administration, communal areas such as the auditorium, library, art room and playroom, and classrooms are clustered together by grade group, with each grade group having its own wing, classrooms and playground.

Long corridors that connect L-shaped classrooms, expansive windows on two exposures that offer views of outside, and lower ceilings offer a more child-friendly, less imposing atmosphere. Interior decoration is kept to a minimum and abstract, so that children are encouraged to imagine and be creative in an open environment, rather than have their imagination inhibited by images or decoration presented to them. Classrooms are self-contained and include a workroom with storage, counters, a sink, a washroom with a child-sized, appropriate-height toilet, shelves, built-in seating and tables and chairs that could easily be re-arranged. Eero Saarinen and his mother Loja Saarinen designed the draperies.

[54] Gyure, The Chicago Schoolhouse, 158, citing Winnetka Parent-Teacher Association, *Your Child and Your School* (Winnetka, IL: 1933), 4, and Carlton W. Washburne & Sidney P. Marland, Jr., *Winnetka: The History and Significance of an Educational Experiment* (Englewood Cliffs, NJ: Prentice Hall Inc., 1963).

Eero also designed the plywood classroom furniture, and his fiancée Lillian Swann created the brightly glazed ceramic reliefs.

Crow Island was widely publicized in architectural and educational journals. A traveling exhibit from the Museum of Modern Art in New York entitled "Modern Architecture for the Modern School "was shown at universities, museums and community centers throughout the country from 1942 – 1946 and highlighted Crow Island and two California schools, Richard Neutra's Corona Avenue School (1943) and Franklin and Kump's Acalanes Union High School (1939 – 1940). The exhibit showcased low-rise school buildings with single- or double-loaded corridors and bright, well-lit self-contained classrooms with lower ceilings. The curator of the exhibit, Elizabeth Mock, urged changes in American school design, arguing that the psychological needs of children could be met with planning, materials and new methods of teaching. The exhibit also highlighted the availability of inexpensive building technology and modern ideas about lighting and furnishings.[55] A traveling exhibition called Schoolroom Progress USA, sponsored by the Henry Ford Museum and Greenfield Village and the Encyclopedia Americana toured the country in the mid-to late 1950s. Five architectural firms contributed model classrooms to showcase the newest ideas, including Perkins and Will.[56]

Crow Island was hailed as a prototype for the modern American school and became one of the most influential school buildings in the country.[57] In 1955 *Architectural Forum* published an article entitled "Crow Island Revisited," and stated "Crow Island appears, if anything, more significant than it did 15 years ago. Time and use – not only here but in many hundred later schools – have proved out the workability of its innovations to a degree that only the wildest optimist in 1940 could have conjectured. The national debt owed Crow Island for ideas large and small is staggering."[58]

The design of many modern schools built after 1940 in Chicago and the rest of the country were influenced by the ideas set forth in the design of Crow Island School. Interior space and furnishings were designed to be more flexible, and "flexibility" became an important concept in modern school design during this time period. Schools were scaled down from the imposing structures of the past. Buildings were fewer stories, often one or two, spread

out, flat-roofed and unimposing. [59] Ceilings were lowered, and "bright, cheerful" colors were introduced into schools to make them "humanized."[60]

Progressive Influences at Crispus Attucks

The design of Crispus Attucks School by Fugard, Burt, Wilkinson & Orth drew on years of progressive designs seen at schools like Crow Island beginning with Dwight Perkins and his son Lawrence. Crispus Attucks was a two-story building with double-loaded corridors, classrooms that were bright and well-lit from an expanse of windows, lower ceilings and flexible space within classrooms and other rooms like the gymnasium that served as a lunchroom, gymnasium and auditorium. The library, positioned on the northwest side of the building, projected from the main façade of the building and had an outside entrance that allowed access to the space by the community. The gymnasium/auditorium was positioned on the northeast side of the building, and also had a separate entrance so the public could access and use the space when school was not in session. Furniture in all classrooms at Crispus Attucks was movable. Built-in wood cabinets and coat hooks in the classrooms were functional and attractive.

The building was divided into "zones," separating the students by age groups and function. Each zone or unit provided a separate function of the school. The south unit was designed for larger, more flexible kindergarten classrooms. The center unit served the rest of the students with traditional classrooms. The north unit contained the shared spaces such as the library, gymnasium, and industrial arts classrooms.

In the south unit, the idea that the youngest children required a different type of learning environment than older school-aged children was the prototype of the modern kindergarten class. Each kindergarten classroom featured its own kitchenette, storage space, bathroom, and playground to provide a more "home-like" experience for small children beginning their school careers. The kindergarten classrooms at Crispus Attucks were intentionally located with a southern exposure and had large windows to maximize access to daylight, which was thought to promote learning and growth. The classrooms could be accessed from the main interior hallway but also had private entrances that could separate the kindergarten children from older students.

The location of the north unit's functional spaces was also a deliberate design decision. The location of these amenities was strategically placed for convenient access to the surrounding community in addition to use by the students. Spaces like the library and

[59] Gyure, The Chicago Schoolhouse, 177; Archie L. Gray and Jerald Blake, chapter 4, "Trend in Materials and Design," "School Plant and Equipment, "*Review of Educational Research* 21, no. 1, (Feb. 1951):28-35.

[60] Gyure, *The Chicago Schoolhouse*, 177.

gymnasium had their own separate entrances and could therefore be utilized for community events and meetings outside of school hours for those living in Stateway Gardens. The gymnasium was separated into two gyms: one for boys and one for girls. However, the girls' gym was raised slightly so that the gym could also be used as a stage and backstage area, with the boys' gym providing space for audience seating.

The main entrance to Crispus Attucks school is not located in the center of the main façade, but off-center toward the north and indicated only by the yellow terra cotta panel surround. Modern architects from this time period often didn't place the building entrances in the center of the building as traditional school buildings, and entrances were not emphasized.[61]

The low-slung modern design aesthetic was as functional as it was cost-effective. The ornament on the Crispus Attucks School was limited to the terra cotta tiles. One of the most significant features of the exterior of the Crispus Attucks Elementary School building is the brightly colored turquoise glazed brick and turquoise and yellow terra cotta units. The terra cotta installed on the exterior of the building was manufactured by the American Terra Cotta Company, which began manufacturing in 1881 and stopped production in 1966.[62] After World War II, the terra cotta industry faced significant challenges, among them the perception that terra cotta was old-fashioned. The few remaining companies, including the American Cotta Company, formed the Architectural Terra Cotta Institute in 1947.[63] The goals of the Institute were to educate building professionals about the uses and properties of terra cotta, to address the shortage of trained craftsmen, to compile statistics of terra cotta being used throughout the United States and to manufacture new products appropriate to the architectural styles of the current period.[64] Terra cotta produced during this time period consisted of simplified, extruded forms with large, flat surfaces and shallow backs. These "wall ashlars" were appropriate for the modernist aesthetics of the time period and could be adhered to plaster, brick or tile. They were often used in public buildings such as libraries, hospitals and schools.[65]

[65] Tunick, "Architectural Terra Cotta "at 45.

The colorful terra cotta used at Crispus Attucks Elementary School was produced during this period. Turquoise ashlars run along the roofline and bright yellow square units surround the main entry. Glazed brick in the same turquoise color was placed above the first- and second-story windows and over entrances. Contrasting with the cream brick, the bright colors cheerfully mark the building as an elementary school and distinguish it from the Stateway Gardens housing project. The pared-back aesthetic was an intentional design choice that both favored progressive styles popular at the time as well as limited budgets for an ever-expanding community population.

4. Post-World War II Chicago Public Schools Development

Explosive population growth from the post-World War II "baby boom" and the *Great Migration*, which began during World War I but accelerated rapidly in the 1940s and 1950s,[66] led to a significant expansion of the Chicago Public School system. Enrollment in the Chicago Public Schools surged after World War II, while figures vary, enrollment increased between 10,000 and 12,000 per year throughout the 1950s.[67] Many schools held classes on double time, or two classes per-day.[68] In order to meet this demand, an enormous building campaign was undertaken. The Chicago Board of Education and Superintendent Herold C. Hunt proposed an unprecedented $50 million school building bond issue that was approved by voters in 1951.[69] Ultimately, during the 1950s, more than a quarter billion dollars in bond issues for school construction were approved in five separate referenda, while the school district's operating budget more than doubled, with almost two-thirds coming from local property taxes.[70]

Benjamin C. Willis succeeded Hunt as superintendent in 1953. Over the course of "Big Ben the Builder's" thirteen-year tenure, CPS built over 200 elementary schools, over a dozen high school buildings, and multiple additions. In addition, CPS purchased more than a

hundred mobile classrooms, and rented other facilities to handle the large number of school age children.[71]

While John C. Christensen was the official CBOE architect, Willis inaugurated the use of private architectural firms to design school buildings because of Willis's belief that private firms would work faster and less expensively than the governmental architects, and because he believed that outside architects would add variety to building design. Within five years of Willis acting as superintendent, 26 outside architects or firms were working on designs for Chicago Public Schools.[72] Private architects designed 20% of the school designs from 1955 – 1957, and 60% of building projects following that period.[73] Some of those firms include Perkins + Will (Overton, Washington, Byrd, Beethoven, Jones Commercial High School), Skidmore, Owings and Merrill (Doolittle), Cone and Dornbusch (Birney, Shoesmith), Schmidt Garden & Erickson (Skinner, John Hancock High School), Loebl, Schlossman and Bennett (Mather High School), Childs & Smith (John Marshall Harlan High School), Naess & Murphy (William J. Bogan High School)Harry Weese Associated (Jens Hensen School), Holabird, Root & Burgee (Dunbar Vocational High School), and of course, Fugard, Burt, Wilkinson & Orth (Crispus Attucks, Joseph Medill and LaSalle).

Willis was adamant that school buildings were planned and built to serve the educational program that best met the needs of children.[74] Consulting with parents, teachers, administrators and neighbors, the board of education studied census records, attendance records, birth rates and real estate issues to ensure that schools were located appropriately and would have the capacity for future enrollment.[75] Willis was interested in the modernist aesthetic because it was functional and attractive, but at the same time he favored those design precepts because it kept construction costs down.[76] Ornamentation was eliminated,

materials were chosen for durability and economy, spaces were designed for multiple use. Steel frames with concrete block walls were built faster and were less expensive, and large expanses of glass eliminated the need for expensive masonry walls. Plaster finishes and wood trim were eliminated from the interior and ceiling heights were lowered. Originally intended as an international design, functional modernism became a cost saving measure.

Chicago Public Schools built during the post-World War II period were for the most part modern, low -rise buildings made of brick, with flat roofs, little or no ornament, and long ribbons of windows grouped together and generally flush with the face of the wall. Numerous buildings incorporated the use of color in masonry or metal. Entries were often minimized in appearance, marked with flat roofs and off-center. Additions often were designed to reference the original building, or were modern.

5. Fugard, Burt, Wilkinson & Orth

The architectural firm of Fugard, Burt, Wilkinson and Orth originated as Thielbar and Fugard in 1925. Founder Frederick J. Thielbar (1866 – 1941) graduated from the University of Illinois and began his career at Holabird & Roche as superintendent of construction. He later became general superintendent and then junior partner of the firm. In 1918 he left the firm to practice on his own, and in 1925 he joined John Reed Fugard to form Thielbar and Fugard. Thielbar was appointed chairman of the committee that revised the Chicago Building in 1935 and was a consultant of federal housing projects in Chicago. He was a trustee of Northwestern University, the Chicago Temple, Methodist Old People's Home, Goodwill Industries, and was president and trustee of the Methodist Social Union and Wesley Memorial Hospital. [77] While at Holabird & Roche Thielbar was involved with the design and construction of city hall and the county building, the Hotel LaSalle, the University Club, and the Chicago Temple Building, among other projects. [78] Thielbar died in 1941 in the Wesley Memorial Hospital Building, once part of Northwestern Memorial Hospital, which he helped design.

Other founder John Reed Fugard (1886 – 1968) graduated from the College of Engineering at the University of Illinois in 1910. Fugard served as the first chairman of the Chicago Housing Authority in 1937 and later rejoined in 1953.[79] He was president of the Illinois Society of Architects, an active member of the American Institute of Architects, the Metropolitan Housing Council, vice-president of the Greater North Michigan Avenue Association, and a member of the Citizens Board of Trustees of the University of Chicago, among other things. He represented the United States at a meeting in Bogota, Colombia on housing in Latin America and represented the Chicago Housing Authority at the International Congress of Housing in Vienna, Austria, both in 1956.[80] He also represented the CHA in an extended tour of Germany and represented the American Institute of Architects in Moscow and Paris.[81]

.

After graduation Fugard formed John Reed Fugard & Co. Fugard later partnered with George Knapp in 1917. Knapp had previously worked for Solon S. Beman. Fugard & Knapp are best known for their designs of luxury hotels and apartment buildings, including 181, 209, 219 and 229 E. Lake Shore Drive, which are contributing to the East Lake Shore Drive Historic District, designated a Chicago Landmark Historic District in 1985[82]; 20 E. Cedar Street; the Neuville, 232 E. Walton Place (listed on the National Register in 2012)[83]; the Mayfair Regent Hotel; the Belmont Hotel; [84] and the Allerton Hotel (associate architects), designated a Chicago Landmark in 1998. Fugard & Knapp also designed the Moody Memorial Church; the Mutual Insurance Building; the Cook County Tuberculosis Sanitarium and South Water Market, possibly the largest wholesale market complex in the world, listed on the National Register of Historic Places in 2004. The first employee of Fugard & Knapp was Gustave Orth.[85]

After Knapp retired, Fugard joined Frederick Thielbar to form Thielbar & Fugard, which designed a number of prominent buildings in Chicago: the Jewelers Building, with Giaver and Dinkelberg (designated a City of Chicago Landmark in February, 1994 and listed as contributing to the Michigan-Wacker Historic District National Register of Historic Places in 1978); 201 E. Delaware (now the Raffaello Hotel); the McGraw Hill Building (façade, elevated walkway and limestone balustrade of north elevation and main lobby designated a Chicago Landmark in 1995); the Trustees System Service Building (designated a Chicago Landmark on January 9, 2003); the Wesley Pavilion, formerly at Northwestern Medical Center; and the 1933 Century of Progress International Exposition Hall of Religion. After Thielbar died in 1941, Fugard formed a "syndicate" of firms to design large wartime projects nationwide from 1941 – 1943. After the war ended in 1945, the firm reorganized to include Paul G. Burt and Laurence E. Wilkinson, Gustave Orth and John R. Fugard Jr.[86]

Fugard, Burt, Wilkinson & Orth was known for its institutional designs, particularly hospitals and schools. Notable hospital designs include the Psychiatric Institute in Chicago with Shaw, Metz & Dolio; an addition to St. Bernard's Hospital in Chicago; Deaconess Hospital in Spokane, Washington; Wesley Memorial Hospital, Chicago; Veterans'

[90]AIA Historical Directory of American Architects, American Architects' Directory, https://aiahistoricaldirectory.atlassian.net/wiki/spaces/AHDAA/pages/20677106/1962+American+Architects+Directory, accessed May 1, 2019; July 24, 1957 Meeting, Proceedings Board of Education City of Chicago Vol. 1, July 1, 1957 – Dec. 21, 1957 1-699: 102; "Proposed Addition to Medill Grade School," *Chicago Tribune,* September 18, 1958; Arthur Jackman, "Recorder, Maker of History Gave Name to Medill School, *Chicago Tribune*, September 16, 1965.

The elementary school buildings that Fugard, Burt, Wilkinson & Orth designed were modern, rectilinear, and mostly devoid of ornamentation, with flat roofs, brick, and ribbons of metal-framed punched windows. Medill School and the La Salle were both designed similarly to the Crispus Attucks school: low-slung, Modernist brick buildings, horizontal in orientation, flat roofs with short parapets and minimal metal parapet caps, and projecting flat metal framed roofs over entries. Brick patterns for all three buildings are the same running bond, while colors are different: Attucks brick is brown, Medill is white and LaSalle is cream. Brick piers that run from the bottom of the first floor windows and extend to the roof frame grouped windows at Attucks and LaSalle, but at Medill the brick piers are confined within the window groupings.

The design for Medill uses color in a similar manner as the design for Crispus Attucks: to frame the windows and mark the entries. In the case of the Medill school, bright yellow glazed brick piers divide windows and bright red brick surrounds entryways. Crispus Attucks is the only school that is designed around an open courtyard. Medill School was designed adjacent to an existing historic building, consequently its site was limited and as a result the playground area is small.

PART II. ARCHITECTURAL DESCRIPTION

A. General Statement

Located at 3808 - 3812 S. Dearborn Street in the Park Manor neighborhood of Chicago, between Wentworth Gardens on the west and Bronzeville on the east, Crispus Attucks Elementary School is a two-story masonry building designed in the International Style and inspired by modernist school building design theory. Light brown and colorful glazed brick and terra cotta, and flat aluminum trimmed roofs grace the exterior. The school sits at grade on the east side of South Federal Street, just east of the I-94, Interstate 90 and the Dan Ryan Expressways, west of South State Street, south of West 37th Street and north of West Pershing Road. The International Style building features a simple, streamlined and unornamented design. It has a U-shaped footprint surrounding a courtyard on the east side.

B. Exterior Description

The Crispus Attucks School is organized into three sections or “units” as the original architects referred to them: a large rectangular central unit, a south unit, and a north unit. All three units are connected. The building has a general horizontal appearance, with windows and brick running horizontally across the elevations, simple punched windows and entrances without framing and no ornamentation. Flat horizontal aluminum roofs further the horizontal feel. Brown bricks are placed in a common bond pattern with a header course every sixth course, and wide, horizontal glazed turquoise terra cotta bricks

run along the roofline. The roof is flat. All of the windows are boarded up except for a few which are open. There is no glazing present. Flat brick pilasters visually divide the windows and reference the structural design of the building. Light blue/green glazed bricks in a running bond pattern are placed above first floor windows and above the second story windows on several elevations.

West Elevation
The main entrance to the building is on the west elevation. Light brown brick and colorful turquoise glazed brick in a running bond pattern and the same color terra cotta at the roofline clad the exterior of center unit of this elevation. Dominated by large horizontal windows on the first and second floors that are boarded up, the elevation is divided by brick "pilasters" that run from the ground to the roof. The sills on the first-floor windows are concrete and aluminum on the second floor. There are entrances just to the north of the center of the center unit, and on the south unit. Bright yellow glazed terra cotta squares surround the recessed main entrance and appear over the doorway on the south entrance to the building, which features an aluminum roof. Aluminum letters on the second floor over the south entrance once read "CRISPUS ATTUCKS ELEMENTARY SCHOOL" but several letters are missing.

South Elevation
The south elevation of the south unit of the building is visually divided in half. The west side of the south elevation is clad in brown brick and large horizontal windows and smaller vertical windows on the first and second floors have concrete sills on the first and second floors. On the east side of the south elevation, fenestration and masonry patterns are the same as the west elevation: light blue/green glazed bricks appear between the first and second floor windows and above the second floor windows and concrete sills are located beneath the first floor windows and aluminum sills below the second floor windows. There are recessed doorways on the first floor on the west side and on the east side; the east side doorway features a flat aluminum roof.

East Elevation
The East elevation of the central unit facing the courtyard repeats the fenestration and masonry patterns from the west elevation: multiple wide horizontal windows on the first and second floors, with light brown brick separating windows. Blue/green glazed brick separate the first and second floor windows and appear on top of the second-floor windows. In the center of center unit elevation is an expanse of light brown brick without colored glazed brick, vertical windows on the second floor and a recessed entrance, loading dock and vertical windows on the first floor. The south unit projects into the interior of the courtyard facing north and repeats the brown brick and blue/green glazed brick from the

other elevations; it also has recessed entrances on the east and north sides. The north unit facing south into the interior of the courtyard is one-story with a double-door entrance, two slender vertical windows and a ribbon of horizontal window voids with concrete sills. The roof of this section bears a smokestack. The east side of the north unit has a recessed entrance accessible by a small concrete stairway. At some point in time the aluminum letters that spelled out CRISPUS ATTUCKS ELEMENTARY SCHOOL from the original plan were replaced with black metal letters that now read CRISPUS ATTUCKS COMMUNITY ACADEMY.

North Elevation
The north elevation of the north unit is clad in the same light brown brick as the other elevations and is visually divided in half. The east side has double-height slightly projecting pilasters between each of the windows which appear only on the second floor, and the west side of the north elevation has windows on the first floor, but not the second floor and no pilasters. The east side also has a small recessed entrance and one-story area that projects westward with large windows and a projecting flat aluminum roof.

C. Interior Description

The interior of the building retains its original layout, features and finishes from its 1957 construction with minor changes from its 1994 renovation. The two-story, U-shaped building was designed as a double-loaded corridor with 17 classrooms on the first floor, including three kindergarten rooms in the south unit; classrooms, the main entrance vestibule, principal's office and other offices in the central unit; and faculty rooms, library, two-story boys' gym and dining hall, girls' gym and locker rooms in the north unit. The area that projects west and north on the west and north elevations is the library. The one-story portion facing the courtyard on the south unit contains the boiler room, a conference room and an engineers' office.

The south unit was intended to separate the younger children from the older students. Separate entrances on the west and east sides of the south unit, as well as a separate play area outside with its own entrance on the south side of the south unit reinforce the separation. The library on the north side of the north unit has an interior window into the hallway and an exterior entrance on the north side. This design might have intended to allow members of the community to access and utilize the library to borrow books, attend meetings, etc.

The double-height boys' gym served as a gymnasium and lunchroom and included kitchen facilities. The north side of the gymnasium features an elevated section which served as

the girls' gymnasium and a stage. Storage units are built under the stage. Locker rooms are connected to the space on the east side.

The walls of interior hallways of the first and second floors are lined with glazed masonry beginning at the floor and rising approximately half-way up to painted concrete masonry that extends to the ceiling. Ceilings in the hallways are acoustical tiles in metal grids. Light brown brick that matches the exterior in a running bond pattern line the walls in the entrance vestibule and stairways. Flooring appears to be concrete with green linoleum tile running down the center of the halls and in cruciform at junctures of hallways. Flooring in the entrance vestibule and classrooms is grey linoleum and clay tile in the stairways. The hallways contain original doors leading to classrooms and offices. Restrooms are typical school restrooms.

Walls in the classrooms are glazed masonry and painted concrete masonry. Some classrooms on the first floor retain original wood cabinetry, shelves and coat or backpack hooks. Classroom ceilings are acoustical tiles in metal grids.

Stairways lead to the second floor. While not observed, the current state of the second floor has not changed from the original design and includes 23 classrooms, faculty and equipment rooms, the upper part of the gymnasium and restrooms.

Interior Lobby

The main entrance retains the original glass fixed transoms. The interior doors are gone. The walls of interior lobby of the main entrance are clad in glazed brick, the same color as the exterior. Plans dated March 6, 1957 included designs for a memorial tablet dedicating the school to its namesake Crispus Attucks and read: CRISPUS ATTUCKS 1723 – 1770 First American to Give his Life While Resisting Tyranny in the Boston Massacre March 5, 1770. The tablet design included a portrait panel. The tablet was recessed in the brick wall in the entrance of the school; it is no longer there but a recess in the wall is evident. A photograph of the tablet was shown in an article in the *Chicago Tribune* in 1965.[91]

D. Site

Historic Landscape Design

The original landscape plan for the school included a grassy lawn surrounding the west and east sides of the building and select areas on the interior of the courtyard on the east side of the building. Original plans prepared by landscape architects Atkinson Fitzgerald

[91] White, Nancy. "Negro Hero Inspiration to Crispus Attucks Pupils," *Chicago Tribune*, February 11, 1965.

included Cockspur Hawthorn, Common Honey Locust, American Elm and Wheatley Elm trees and Privet shrubs along the west, south, east and north elevations and along the interior of the courtyard. The interior of the courtyard on the east side was designed as a playground and included basketball backstops and volleyball ports and sleeves. Another playground was situated on the south side of the building for the kindergarten and younger grades and included taubark (mulch) and a sandy area. A parking lot was placed on the south side of the site along South Dearborn Street and West Pershing Road.

A. General Site Description

The Crispus Attucks School occupies a parcel of land on the east side of South Federal Street, just east of the I-94, Interstate 90 and the Dan Ryan Expressways, west of South State Street, south of W. 37th Street and north of W. Pershing Road. Looking west, the building faces onto South Dearborn Street, a large grassy area, South Federal Street and the expressways. The east (rear) elevation face South State Street and a five-story residential building on the southeast and a vacant lot on the northeast. Looking north the building faces a grassy park. A chain-link fence surrounds the parcel on three sides: on the north, the east and west. A more recent wrought iron fence joins the chain link fence on the south portion of the site and extends along the east elevation. A concrete pedestrian sidewalk encircles the property on all four sides.

Light vegetation including grass, shrubs and a few trees are located on the site. One large shrub appears on the west elevation and a row of large deciduous trees line the perimeter of the property along the sidewalk on the south and east elevations. Stateway Park, a large green open grassy park is on the north side of the site and a baseball field sits on the northeast side of the park.

The location of the Crispus Attucks School was planned as part of planning for the Stateway Gardens housing project, which has been demolished. The building now sits amid vacant land between Dearborn and Federal Streets on the west, on the south, the park on the north, one five-story residential building on the southeast and another vacant lot on the northeast.

Res. 53D, September, 1969 District Arrangement" located in the City of Chicago Department of Planning and Development, Historic Preservation Division, and reprinted as Table 5, Schools Built by the Chicago Board of Education, 1872 to 1970, by District, in Carl W. Condit, *Chicago, 1930 – 1970* (Chicago and London: The University of Chicago Press, 1974), 291.

Included in this table are only those schools that were built or added onto during the post-World War II period, from 1945 – 1970. Information about "portable," "mobile" and "relocatable"classrooms is included in the original document but not here.

Table 1

Name of School	Orig. Const. Date	Additions
Beard	1958	
Perkins Branch of Beard	1960	
Stock Branch of Ebinger	1955	1961
Edgebrook	1939	1954
Edison	1945	1950 - 55
Garvy	1936	1947-53
Oriole Park	1943	1948-1952
Sauganash	1936	1954
Thoreau Branch of Sauganash	1959	
Solomon	1953	1956
Wildwood	1944	1952
Andersen	1955	1961
Carpenter	1957	
Pulaski	1949	
Wicker Park Primary and Intermediate Grades	1961	
Yates Upper Grade Center	1962	
Conty	1936	1950-53
Dever	1935	1955
May	1905	1937-53-67
Spencer	1904	1927-68

Mather High	1959	
Barrelme Branch of Armstrong	1959	
Boone	1928	1952-56
Clinton	1926	1953
Decatur	1958	
Wm. Green	1954	
Jamieson	1937	1955
Kilmer	1931	1936-59
Rogers	1937	1952-55
Hanson Park Brach of Schubert	1959	
Waller High (Lincoln Park High School)	1901	1902-38-62
Jones Commercial High	1967	
Alcott	1937	1961
Arnold Upper Grade Center	1962	
Byrd	1960	
Jenner	1908	1925 – 54-58
La Salle	1961	
Manierre	1947	1952-62
Mayer	1959	
Newberry	1937	1959
Ogden	1953	
Schiller	1961	
Phillips High	1904	1937 - 45
Dunbar Vocational High	1956	
Abbott	1949	1954-61

IL-1251-66 Crispus Attucks School view from the boys' gymnasium facing east wall with the basketball loop hanging overhead.
IL-1251-67 Crispus Attucks School view from the boys' gymnasium facing north west corner with the entrance leading to the serving kitchen.
IL-1251-68 Crispus Attucks School view from the boys' gymnasium facing north wall.
IL-1251-69 Crispus Attucks School view from the boys' gymnasium facing north wall.
IL-1251-70 Crispus Attucks School view from the boys' gymnasium facing north east wall corner.
IL-1251-71 Crispus Attucks School view from the boys' gymnasium facing south east corner wall facing the passage leading to the corridor.
IL-1251-72 Crispus Attucks School view of the basketball loop on the east wall.
IL-1251-73 Crispus Attucks School view from the boys' gymnasium facing the niche on the south wall.

IL-1251-74 Crispus Attucks School view from the boys' gymnasium facing the gymnasium storage entrance on the south west wall corner.
IL-1251-75 Crispus Attucks School view from the industrial arts room facing the east wall.
IL-1251-76 Crispus Attucks School view from the industrial arts room facing the north east corner wall.
IL-1251-77 Crispus Attucks School view from the industrial arts room facing the exit door in the east wall.
IL-1251-78 Crispus Attucks School view from the industrial arts room facing the closet space in the north wall.
IL-1251-79 Crispus Attucks School view from the industrial arts room facing the south west wall corner.
IL-1251-80 Crispus Attucks School view from the industrial arts room facing the south west wall corner.
IL-1251-81 Crispus Attucks School view from the north corridor facing the corridor that leads to the south block.
IL-1251-82 Crispus Attucks School view from the north corridor facing the vestibule in the east leading to the east exit.
IL-1251-83 Crispus Attucks School view from the boiler room's entrance facing the exterior wall on the south side.
IL-1251-84 Crispus Attucks School view of the exterior south wall of the north block from where the chimney of the boiler room is visible.
IL-1251-85 Crispus Attucks School view of the exterior south wall of the north block.
IL-1251-86 Crispus Attucks School view of the exterior north and east wall of the south block.
IL-1251-87 Crispus Attucks School view from the exterior facing the east entrance and the east wall corner of the north block with school's name on black block letters.
IL-1251-88 Crispus Attucks School view from the exterior facing the industrial art room's entrance.
IL-1251-89 Crispus Attucks School view of the north exterior wall of the north block and the fence.
IL-1251-90 Crispus Attucks School view of the north exterior wall of the north block and the fence.
IL-1251-91 Crispus Attucks School view of the corner of north exterior wall of the north block and S. Dearborn street.
IL-1251-92 Crispus Attucks School view along the west exterior wall and the S. Dearborn street.
IL-1251-93 Crispus Attucks School view from the north end of S. Dearborn street facing the north west corner of the building.
IL-1251-94 Crispus Attucks School view from the S. Dearborn street facing north of the west exterior wall of the building.
IL-1251-95 Crispus Attucks School view from the S. Dearborn street facing south of the west wall.
IL-1251-96 Crispus Attucks School view of the west entrance of the north block.
IL-1251-97 Crispus Attucks School view of the window glazing next to the west entrance of the north block.
IL-1251-98 Crispus Attucks School view of the west entrance of the south block.

IL-1251-99 Crispus Attucks School closer view of the west entrance of the south block.
IL-1251-100 Crispus Attucks School view of the south corner of the west wall of the south block with the school's name in aluminum block letters.
IL-1251-101 Crispus Attucks School view of the north end of the west wall within the fence boundary.
IL-1251-10 Crispus Attucks School view of the south corner of the west wall of the south block with the school's name and partial view of the playground.
IL-1251-103 Crispus Attucks School view of the west entrance of the south block and the school's name in aluminum block letters.
IL-1251-104 Crispus Attucks School view of the south west corner of the building.
IL-1251-105 Crispus Attucks School view of the south west corner of the building.
IL-1251-106 Crispus Attucks School view of the path leading to the west entrance of the south block.
IL-1251-107 Crispus Attucks School view of the left corner of the south block.
IL-1251-108 Crispus Attucks School view of the south façade of the building.
IL-1251-109 Crispus Attucks School view of the south façade of the building and the vestibule entrance that leads to the kindergarten rooms.
IL-1251-110 Crispus Attucks School view of the south façade of the building and the vestibule entrance that leads to the kindergarten rooms.
IL-1251-111 Crispus Attucks School view along the east façade of the south block.
IL-1251-112 Crispus Attucks School view of the central unit and block with the boiler rooms chimney visible.
IL-1251-113 Crispus Attucks School view of the south block's star hall entrance.
IL-1251-114 Crispus Attucks School view of the north exterior wall of the south block.
IL-1251-115 Crispus Attucks School view of the south façade of the building and the vestibule entrance that leads to the kindergarten rooms.
IL-1251-116 Crispus Attucks School view of the niche created by the north wall and east wall of the south block and the central unit respectively.
IL-1251-117 Crispus Attucks School view of the niche created by the north wall and east wall of the south block and the central unit respectively.
IL-1251-118 Crispus Attucks School view from the boiler room facing the exit door.
IL-1251-119 Crispus Attucks School view of the men's faculty room corner wall.
IL-1251-120 Crispus Attucks School view of the flooring of the corridor.
IL-1251-121 Crispus Attucks School view from the north – south connection corridor facing the vestibule that leads to the east exit of the north block.
IL-1251-123 Crispus Attucks School view from star hall facing the west exit door of the south block.
IL-1251-124 Crispus Attucks School view of the west wall room a classroom next to the room facing the lobby that leads to the west exit of the north block.
IL-1251-125 Crispus Attucks School view of the south west corner wall of the same classroom.
IL-1251-126 Crispus Attucks School view from the classroom facing the east glazing wall.
IL-1251-127 Crispus Attucks School view of the classroom's ceiling.

IL-1251-128 Crispus Attucks School view of the north – south connection corridor flooring.
IL-1251-129 Crispus Attucks School view of the north – south connection corridor flooring.

IL-1251-130 Crispus Attucks School view of the north – south connection corridor flooring leading to the vestibule of the west exit of north block.
IL-1251-131 Crispus Attucks School view from star hall facing the west exit door of the south block.
IL-1251-132 Crispus Attucks School view from the corridor that leads to the boys' gymnasium.
IL-1251-133 Crispus Attucks School view from north end of the north - south corridor facing the star hall.
IL-1251-134 Crispus Attucks School view from the boys' gymnasium facing the basketball loop on the east wall.
IL-1251-135 Crispus Attucks School view of the passage between boys' toilet and the physical-ed. office that leads to the boys' gymnasium.
IL-1251-135 Crispus Attucks School view of the passage between the physical- ed. office and girls' toilet that leads to the girls' gymnasium.
IL-1251-137 Crispus Attucks School view of the exterior wall of the industrial art's room in the north block.
IL-1251-138 Crispus Attucks School view of the entrances in the east wall of the central unit.
IL-1251-139 Crispus Attucks School view of the west façade of the building from the S. Dearborn street.
IL-1251-140 Crispus Attucks School view of the east entrance of the north block.
IL-1251-141 Crispus Attucks School view of the girls' gymnasium entrance and the school's name in black block letters above.
IL-1251-142 Crispus Attucks School view of the library's exterior north west wall in the north block.
IL-1251-143 Crispus Attucks School view of the west entrance of the north block.
IL-1251-144 Crispus Attucks School view of the tile wall cladding used on the west entrance of the south block.

CRISPUS ATTUCKS ELEMENTARY SCHOOL

3808-3812 S Dearborn Street, Chicago, Cook County, IL 60609

STATEMENT OF SIGNIFICANCE

THE CRISPUS ATTUCKS ELEMENTARY SCHOOL, NAMED FOR THE AFRICAN AMERICAN REVOLUTIONARY WAR HERO CRISPUS ATTUCKS, IS LOCATED AT 3808-12 S. DEARBORN STREET IN CHICAGO. DESIGNED IN 1957 DURING A PERIOD OF SIGNIFICANT EXPANSION OF CHICAGO PUBLIC SCHOOLS ELEMENTARY SCHOOLS DUE TO THE POST-WORLD WAR II "BABY BOOM" AND THE GREAT MIGRATION POPULATION EXPLOSION, THE SCHOOL WAS BUILT TO ACCOMMODATE THE STATEWAY GARDENS PUBLIC HOUSING PROJECT. AS INFLUENCED BY PROGRESSIVE IDEALS THAT ARE REPRESENTED IN BOTH PLAN AND PROGRAM, THE SCHOOL S ARCHITECTS EMBRACED THESE MODERN DESIGN THEORIES TO CONNECT THE SCHOOL WITH THE SURROUNDING COMMUNITY.

PROJECT INFORMATION:
THIS IL HAER RECORDATION PROJECT WAS UNDERTAKEN TO FULFILL STIPULATION X OF THE MEMORANDUM OF AGREEMENT BETWEEN THE CITY OF CHICAGO DEPARTMENT OF FLEET AND FACILITY MANAGEMENT, THE CHICAGO HOUSING AUTHORITY, AND THE ILLINOIS STATE HISTORIC PRESERVATION OFFICER REGARDING THE DEMOLITION AND NEW CONSTRUCTION OF A MIXED-USE DEVELOPMENT AT 3808-3812 SOUTH DEARBORN STREET IN CHICAGO, ILLINOIS. THE SUBJECT MEMORANDUM WAS EXECUTED TO ENSURE COMPLIANCE BY ALL PARTICIPATING PARTIES WITH THE ILLINOIS STATE AGENCY HISTORIC RESOURCES PRESERVATION ACT (20 ILCS 3420).

LOCATION PLAN

SPECIFICATIONS

WORK INCLUDED: FURNISH ALL LABOR, MATERIAL, TOOLS, EQUIPMENT, AND SCAFFOLDING, INCLUDING ANY OTHER INCIDENTAL ITEMS, REQUIRED FOR FURNISHING AND INSTALLATION OF LETTER SIGNS AS HEREIN SPECIFIED, AND SHOWN ON DRAWINGS, READY FOR USE.

GENERAL: ALL LETTERS TO BE MADE IN THE SHOP, ASSEMBLED, FINISHED, PACKED, CRATED, etc., TRANSPORTED TO THE SITE, UNCRATED AND SET IN THEIR PERMANENT LOCATION, READY FOR USE. ANY PARTS DAMAGED IN HANDLING OR SHIPPING SHALL BE CORRECTED IN A NEAT AND WORKMANLIKE MANNER.

ALL LETTERS TO BE NEW, UNUSED, FIRST QUALITY AND OF APPROVED TYPES AND DESIGNS.

REMOVE ALL PACKING, CRATING, AND DEBRIS FROM THE PREMISES IMMEDIATELY. SALVAGED EQUIPMENT SHALL BECOME THE PROPERTY OF THIS CONTRACTOR AND SHALL BE REMOVED FROM THE SITE.

GUARANTEE: ALL LETTERS SHALL BE GUARANTEED FOR A PERIOD OF ONE YEAR FROM DATE OF ACCEPTANCE BY THE OWNER, AGAINST ALL DEFECTS IN WORKMANSHIP OR MATERIALS.

SEPARATE PROPOSAL BIDS SHALL BE SUBMITTED FOR LETTERS IN GROUP "A" AND GROUP "B"

THE BASE BID SHALL BE SUBMITTED FOR THE LETTERS TO BE OF STAINLESS STEEL AND AN ALTERNATE BID SUBMITTED FOR THE LETTERS TO BE OF CAST ALUMINUM WITH A BAKED ENAMEL FINISH.

FOR THE BASE BID THE LETTERS SHALL BE OF HEIGHT, STROKE AND DEPTH AS SHOWN ON DRAWING; FLAT FACED, AND FABRICATED FROM 20 GAUGE, 18-8 ALLOY STAINLESS STEEL WITH NO 4 FINISH, ERECTED BY MOULDING TYPE INDICATED. LETTERS SHALL BE CONTINUOUSLY SOLDERED AND BE FREE FROM WAVES AND WARPS.

FOR THE ALTERNATE BID THE LETTERS SHALL BE OF HEIGHT, STROKE AND DEPTH AS SHOWN ON DRAWING; LETTERS SHALL BE FROM NO 43 ALLOY ALCOA ALUMINUM, EDGES AND FACES ARE FILLED AND GROUND SMOOTH AND A ZINC CHROMATE PRIMER ADDED. THE LETTERS ARE TO BE FINISHED IN THE BEST GRADE GLOSSY ENAMEL BAKED FOR 5 HOURS AT TEMPERATURES OF 325° to 375°F. THE COLOR OF ENAMEL IS TO MATCH THE MASONRY COLOR FOR GLAZED BRICK GIALLA, TO SHADE # 2878 "FORM GRAY GREEN" AS MANUFACTURED BY ARVTEX CERAMIC CORPORATION.

DETAIL SHOP DRAWINGS TO BE SUBMITTED FOR APPROVAL BEFORE FABRICATION. THIS CONTRACTOR SHALL ALSO SUPPLY A FULL SCALE TEMPLATE FOR POSITIONING OF BRACKETS.

BRACKETS TO BE OF NON-CORROSIVE METAL SIMILAR TO LETTERING.

SPECIAL NOTES:

Fan and Duct Work changes in Fan System for Commonwealth Edison Co. Electric Vault.

Change Fan E-13 from 910 CFM 1/4"SP 880 RPM Noise Isolation Hangers 1/4 HP 120 Volt 1 ϕ 60 cycle.

to

Clarage Fan #1 3/8 LS ready Unit 3000 CFM 500 RPM 3/8" SP Noise Isolation Hangers or Units on Angle Supports 3/4 HP 3 ϕ 60 cycle 208 Volt Motor, size #1 Magnetic starter.

Change Discharge duct to Tunnel 30 x 12 from 9" x12"

Change intake duct to 18" round thru wall into a 20" square plenum x 12" deep with 14 x 12 duct as original with 12 x 12 opening in plenum.

Fire damper shall be #12 gauge and either weighted or offset shaft and close against air flow and spring catch shall damper closed.

Connect fan to clean up circuit for 3 phase power Electrical contractor to provide 3 phase Electrical service for fan.

All information regarding technical data in transformer vault consult Commonwealth Edison Co.
Specifications - S-10510

LOADINGS

PARTIONS	-	20 PSF.
LIVE LOADS -		
CLASSROOMS	-	40 PSF.
CORRIDORS AND STAIRWAYS	-	100 PSF.
ROOF	-	25 PSF.
MAX. ALLOWABLE SOIL PRESSURE	-	4000 PSF. GROSS.

GENERAL NOTES

1. ALL CONCRETE TO HAVE A MINIMUM ULTIMATE COMPRESSIVE STRENGTH OF 3000 P.S.I. AT THE AGE OF 28 DAYS.
2. REINFORCING BARS TO BE DEFORMED; ROLLED OF NEW INTERMEDIATE GRADE BILLET STEEL, EXCEPT FOOTING DOWELS, COLUMN VERTICALS AND DOWELS, WHICH SHALL BE DEFORMED BARS OF HARD GRADE BILLET OR RAIL STEEL.
3. ALL REINFORCING BARS, EXCEPT #2 SIZE, TO HAVE DEFORMATIONS MEETING A.S.T.M. A305-50T.
4. MINIMUM CONCRETE COVER OVER MAIN REINFORCING SHALL BE: ¾" FOR SLABS, 1" FOR JOISTS, 1½" FOR BARS AT BOTTOM FACE OF BEAMS, 2" FOR BARS AT TOP FACE OF BEAMS, 2" FOR WALLS, & 3" FOR FOOTINGS.
5. ALL SOLID SLAB BARS SHALL BE ALTERNATE STRAIGHT AND BENT EXCEPT IN SLABS 4" THICK OR LESS, WHICH SHALL HAVE STRAIGHT BOTTOM BARS AND TOP BARS WHERE CONTINUOUS.
6. ALL ONE WAY SLABS SHALL HAVE TEMPERATURE STEEL AT RIGHT ANGLES AND ABOVE MAIN REINFORCING AS FOLLOWS: 4" SLAB - #3 @12", 5"-6" SLABS - #3@9", 7"-8" SLABS - #4@12"
7. ALL SLABS ON FILL OR GROUND TO BE REINFORCED WITH 6"x6", #6x#6 WELDED WIRE MESH, USING 6" LAPS AT SPLICES, AND SHALL BE POURED BETWEEN CONSTRUCTION JOINTS IN CHECKERBOARD FASHION.
8. ALL BENT BARS TO BE BENT IN ACCORDANCE WITH TYPICAL BAR BENDING DIAGRAMS.
9. ALL SLABS, JOISTS, AND BEAMS ARE TO BE PROVIDED WITH SPACERS NOT MORE THAN 5'-0" CENTER TO CENTER AND NOT LESS THAN TWO PER SPAN.
10. PROVIDE HI-CHAIRS AND SUPPORT BARS FOR BENT UP PORTION OF SLAB BARS OR TOP BARS.
11. PROVIDE SUPPORT BARS FOR STIRRUPS WHERE NECESSARY.
12. CONTRACTOR TO PROVIDE THE NECESSARY OPENINGS THRU SLABS FOR VENTILATING DUCTS, MECHANICAL AND ELECTRICAL EQUIPMENT, ETC. ALSO SEE ARCHITECTURAL, MECHANICAL AND ELECTRICAL DRAWINGS, PROVIDE JOISTS AND HEADERS TO FRAME OPENINGS.
13. BEND HORIZONTAL WALL STEEL 2'-0" AROUND ALL CORNERS AND INTERSECTIONS OR PROVIDE BENT DOWELS 4'-0" LONG OF SAME SIZE AND NUMBER AS HORIZONTAL STEEL.
14. MAINTAIN BRACING FOR ALL WALLS UNTIL FLOORS ARE IN PLACE.
15. PROVIDE ONE (1) BRIDGING JOIST IN CENTER OF ALL JOIST SPAN. BRIDGING JOISTS TO BE 5" WIDE REINFORCED WITH #4 BAR TOP AND BOTTOM - CONTINUOUS. LAP BARS 1'-6" AT SPLICES.
16. PROVIDE 4"x12" #6/6/10 WELDED WIRE MESH IN TOP SLAB OF JOIST CONSTRUCTION THRU-OUT.

NOTES :

DASH LINES — — — INDICATE THE APPROXIMATE LOCATIONS OF BUILDINGS WHICH HAVE BEEN WRECKED.

ELEVATION FIGURES IN BOXES [0.00] INDICATE THE APPROXIMATE LEVELS OF BASEMENT FLOORS IN WRECKED BUILDINGS.

LINES ——+——+—— INDICATE CHAIN LINK FENCE.

STIPPLED AREAS [▒▒▒] INDICATE BITUMASTIC SURFACES.

PLANTED AREAS TO HAVE LOAM 8" DEEP, FINE GRADED.

ALL OTHER PLAYGROUND SURFACES BETWEEN BUILDING AND CHAIN LINK FENCE TO BE WATERBOUND MACADAM.

LOCATION PLAN

SPECIFICATIONS

WORK INCLUDED: FURNISH ALL LABOR, MATERIAL, TOOLS, EQUIPMENT, AND SCAFFOLDING, INCLUDING ANY OTHER INCIDENTAL ITEMS, REQUIRED FOR FURNISHING AND INSTALLATION OF LETTER SIGNS AS HEREIN SPECIFIED, AND SHOWN ON DRAWING, READY FOR USE.

GENERAL: ALL LETTERS TO BE MADE IN THE SHOP, ASSEMBLED, FINISHED, PACKED, CRATED, ETC., TRANSPORTED TO THE SITE, UNCRATED AND SET IN THEIR PERMANENT LOCATION, READY FOR USE. ANY PARTS DAMAGED IN HANDLING OR SHIPPING SHALL BE CORRECTED IN A NEAT AND WORKMANLIKE MANNER.

ALL LETTERS TO BE NEW, UNUSED, FIRST QUALITY AND OF APPROVED TYPES AND DESIGNS.

REMOVE ALL PACKING, CRATING, AND DEBRIS FROM THE PREMISES IMMEDIATELY. SALVAGED EQUIPMENT SHALL BECOME THE PROPERTY OF THIS CONTRACTOR AND SHALL BE REMOVED FROM THE SITE.

GUARANTEE: ALL LETTERS SHALL BE GUARANTEED FOR A PERIOD OF ONE YEAR FROM DATE OF ACCEPTANCE BY THE OWNER, AGAINST ALL DEFECTS IN WORKMANSHIP OR MATERIALS.

SEPARATE PROPOSAL BIDS SHALL BE SUBMITTED FOR LETTERS IN GROUP "A" AND GROUP "B"

THE BASE BID SHALL BE SUBMITTED FOR THE LETTERS TO BE OF STAINLESS STEEL AND AN ALTERNATE BID SUBMITTED FOR THE LETTERS TO BE OF CAST ALUMINUM WITH A BAKED ENAMEL FINISH.

FOR THE BASE BID THE LETTERS SHALL BE OF HEIGHT, STROKE AND DEPTH AS SHOWN ON DRAWING; FLAT FACED, AND FABRICATED FROM 20 GAUGE, 18-8 ALLOY STAINLESS STEEL WITH NO 4 FINISH, ERECTED BY MOUNTING TYPE INDICATED. LETTERS SHALL BE CONTINUOUSLY SOLDERED AND BE FREE FROM WAVES AND WARPS.

FOR THE ALTERNATE BID THE LETTERS SHALL BE OF HEIGHT, STROKE AND DEPTH AS SHOWN ON DRAWING; LETTERS SHALL BE FROM NO 43 ALLOY ALCOA ALUMINUM. EDGES AND FACES ARE FILLED AND GROUND SMOOTH AND A ZINC CHROMATE PRIMER ADDED. THE LETTERS ARE TO BE FINISHED IN THE BEST GRADE GLOSSY ENAMEL BAKED FOR 5 HOURS AT TEMPERATURES OF 325° to 375°F. THE COLOR OF ENAMEL IS TO MATCH THE MASONRY COLOR FOR GLAZED BRICK SIMILAR TO SHADE S-283 "STORM GRAY GREEN" AS MANUFACTURED BY ARKYTEX CERAMIC CORPORATION.

DETAIL SHOP DRAWINGS TO BE SUBMITTED FOR APPROVAL BEFORE FABRICATION. THIS CONTRACTOR SHALL ALSO SUPPLY A FULL SCALE TEMPLATE FOR POSITIONING OF BRACKETS.

BRACKETS TO BE OF NON-CORROSIVE METAL SIMILAR TO LETTERING.

- CONDUIT RISER
- NEW SURFACE MOUNTED LOUD SPEAKER ON NEW OUTLET AND NEW SURFACE MOUNTING CALL BACK SWITCH,
- NEW SURFACE MOUNTED SOUND COLUMN ON EXISTING OUTLET SEE SPECIFICATIONS
- J — EXISTING JUNCTION BOX IN EXISTING CONDUIT SYSTEM CONCEALED ABOVE SUSP. CEILING,
- NEW MICROPHONE RECEPTACLE IN EXISTING FLUSH OUTLET,
- V — NEW MICROPHONE VOLUME CONTROL IN NEW OUTLET. CONNECT TO CHANNEL B PRE-AMP IN MAIN CONSOLE
- NEW BI-DIRECTIONAL CORRIDOR SPEAKER SOUNDOLIER #512-8
- NEW SOUND SYSTEM CABLES IN EXISTING CONDUIT SYSTEM SOUND CIRCUITS AS NOTED
- +X+ — NEW SOUND SYSTEM CABLES IN NEW CONDUIT RUN CONCEALED ABOVE SUSPENDED TILE CEILING
- -C- — NEW CORRIDOR SPEAKER CABLE RUN CONCEALED ABOVE SUSP. TILE CEILING
- Pvc — PRIVACY SWITCH AND VOLUME CONTROL INCORPORATED IN CALL SWITCH.
- MOVIE PROJECTOR SOUND INPUT RECEPTACLE IN SURFACE OUTLET & VOLUME CONTROL

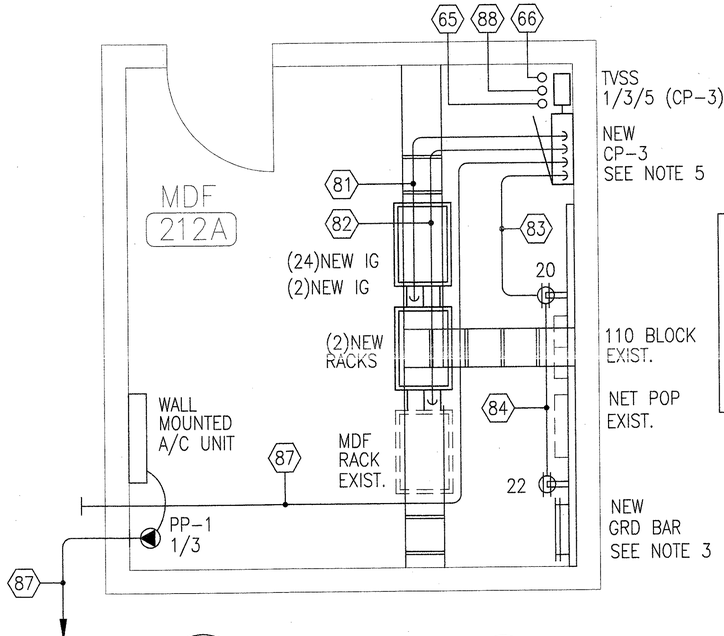
ENLARGED PLANS

SHEET NO.

2100–SK–E4

CRISPUS ATTUCKS ELEM.–APPENDIX B–POWER SCOPE OF WORK (PROJECT #2000–2100–Y2D)

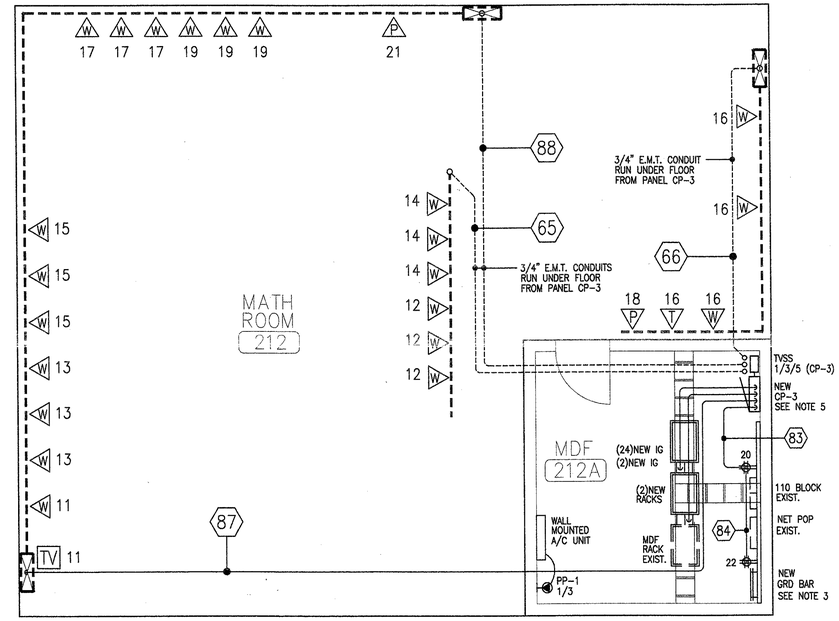


1 MDF ROOM PLAN
1/4" = 1' – 0"

NORTH

NOTES:

1. ALL DEVICE SHOWN IN MDF OR IDF ROOM ARE EXISTING UNLESS NOTED OTHERWISE ALL NEW IG RECEPTACLE, PANEL, BUS, AND WIRING WORK SHALL BE FURNISHED AND INSTALLED BY POWER CONTRACTOR UNDER THIS CONTRACT.
2. ALL NEW WORK SHALL PER LATEST CPS SPECIFICATIONS AND LOCAL CODE.
3. NEW 20X4 GROUND BUS #6, AWG CONNECT TO NEW PNL CP–3 EQUIPMENT GRD BUS
4. NEW IG RECEPTACLES FEED FROM NEW PNL CP–3 IN MDF ROOM.
5. NEW POWER PANEL 200A 42P 120/208 3ø 4W IG 200% NEUTRAL.



2 MDF & MATH ROOM PLAN

NOTES:

1. ITEMS SHOWN ON DASHED LINES ARE EXISTING AND ITEMS SHOWN ON SOLID LINE ARE NEW UNLESS NOTED OTHERWISE.
2. NEW 30"x30"x12" PULL BOX ON THE FIRST FLOOR NEAR THE BOILER ROOM. 15 FOOT OF SLACK FEEDER CABLE IS PROVIDED IN THIS BOX FOR CONNECTION TO THE FUTURE NEW FEEDER FROM THE FUTURE NEW SWITCHBOARD TO BE COMPLETED UNDER A SEPARATE SCOPE OF WORK.
3. NEW 200A, 120/208V 3ø 4W COMPUTER BRANCH PANEL SHALL HAVE,

   200% NEUTRAL BUS
   ISOLATED GROUND BUS
   EQUIPMENT GROUND BUS
   TVSS CONNECTION (30A/3P)
   MAIN CIRCUIT BREAKER
   NEW 20A/1P BRANCH CIRCUIT BREAKER

4. NEW 225A, 120/208V 3ø 4W AC POWER BRANCH PANEL SHALL HAVE,

   EQUIPMENT GROUND BUS
   MAIN CIRCUIT BREAKER
   (11) 20A/2P BRANCH CB FOR PP–1
   (10) 20A/2P BRANCH CB FOR PP–2

5. NEW 600A, 120/208V 3ø 4W COMPUTER DISTRIBUTION PANEL SHALL HAVE,

   200% NEUTRAL BUS
   ISOLATED GROUND BUS
   EQUIPMENT GROUND BUS
   TVSS CONNECTION (60A/3P)
   MIN. FAULT CURRENT 65,000.

6. NEW 600A, 120/208V 3ø 4W AC POWER DISTRIBUTION PANEL SHALL HAVE,

   EQUIPMENT GROUND BUS
   MIN. FAULT CURRENT 65,000.

7. PROVIDE NEW FUSIBLE DISCONNECT AS INDICATED TO WALL MOUNT NEXT TO EXIST SWBD. THE TEMPORARY FEEDERS SHALL DIRECT TAP ON EXIST. MAIN BUS. THIS CONNECTION TO BE REMOVED AFTER SERVICE UPGRADE, TO BE COMPLETED UNDER A SEPARATE SCOPE OF WORK

NOTE:
THESE RECORD DRAWINGS DESCRIBE THE INSTALLATION OF THE LAN EQUIPMENT, i.e.: CONDUITS, CABLES, CIRCUITS, SWITCHES, PANELS, OUTLETS, PENETRATIONS, ETC., AT THE SITE PERFORMED UNDER THE YEAR 2 BUILD SCOPE OF WORK. THE BACKGROUND DRAWINGS AND INFORMATION ON WHICH THEY ARE BASED ARE BELIEVED ACCURATE, BUT SHOULD NOT BE USED FOR ANY NEW CONSTRUCTION OR DESIGN WITHOUT FURTHER FIELD VERIFICATION.

NOTE:

THESE RECORD DRAWINGS DESCRIBE THE INSTALLATION OF THE LAN EQUIPMENT, i.e.: CONDUITS, CABLES, CIRCUITS, SWITCHES, PANELS, OUTLETS, PENETRATIONS, ETC., AT THE SITE PERFORMED UNDER THE YEAR 2 BUILD SCOPE OF WORK. THE BACKGROUND DRAWINGS AND INFORMATION ON WHICH THEY ARE BASED ARE BELIEVED ACCURATE, BUT SHOULD NOT BE USED FOR ANY NEW CONSTRUCTION OR DESIGN WITHOUT FURTHER FIELD VERIFICATION.

(P)=PHASE, (N)=NEUTRAL, (IG)=ISOLATED GROUND, (EG)=EQUIPMENT GROUND, J.B.= JUNCTION BOX

NOTE:

THESE RECORD DRAWINGS DESCRIBE THE INSTALLATION OF THE LAN EQUIPMENT, i.e.: CONDUITS, CABLES, CIRCUITS, SWITCHES, PANELS, OUTLETS, PENETRATIONS, ETC., AT THE SITE PERFORMED UNDER THE YEAR 2 BUILD SCOPE OF WORK. THE BACKGROUND DRAWINGS AND INFORMATION ON WHICH THEY ARE BASED ARE BELIEVED ACCURATE, BUT SHOULD NOT BE USED FOR ANY NEW CONSTRUCTION OR DESIGN WITHOUT FURTHER FIELD VERIFICATION.

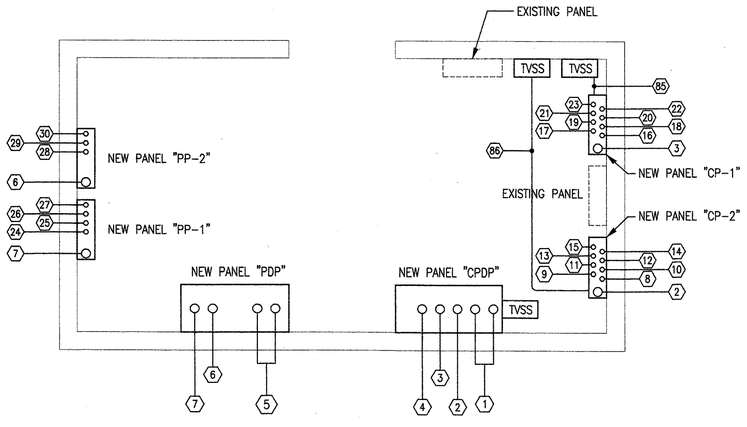
1 ROOM 220 ENLARGED PLAN — 1/4" = 1' – 0" — NORTH



2 ELECTRICAL ROOM ENLARGED PLAN — 1/2" = 1' – 0" — NORTH

SYMBOL LIST

- W – STUDENT STATION
- P – PRINTER STATION
- T – TEACHER STATION
- TV – MMTV OUTLET
- CCE – CLASSROOM CONCENTRATOR ENCLOSURE
- LCE – LABORATORY CONCENTRATOR ENCLOSURE
- ACE – ADMINISTRATIVE CONCENTRATOR ENCLOSURE
- TVSS – TRANSIENT VOLTAGE SURGE SUPPRESSOR
- – DUPLEX RECEPTACLE – NEMA 5–20R GROUNDING – 120V, 1P
- – DOUBLE DUPLEX RECEPTACLE
- – AIR CONDITIONING UNIT RECEPTACLE – 30A, 2P, 250V
- K – KRONOS TIMEKEEPING SYSTEM
- K$ – TWO POLE 20 AMP 277/120V KEYED TOGGLE SWITCH
- – CIRCUIT BREAKER PANELBOARD
- V4000 WIREMOLD – NEW
- V3000 WIREMOLD – NEW
- V4000 WIREMOLD – EXISTING
- CONDUIT RISER UP
- CONDUIT RISER UP
- EXPOSED CONDUIT
- CONCEALED CONDUIT

(P)=PHASE, (N)=NEUTRAL, (IG)=ISOLATED GROUND, (EG)=EQUIPMENT GROUND, J.B.= JUNCTION BOX

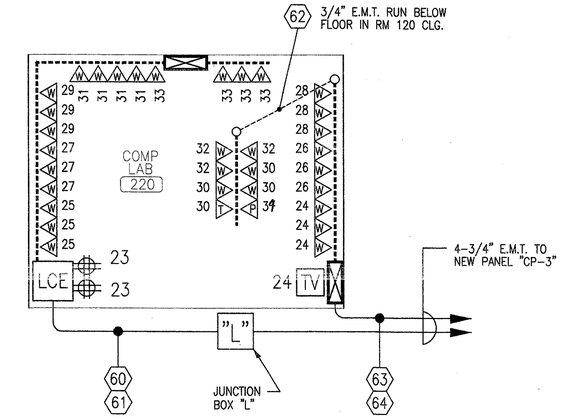
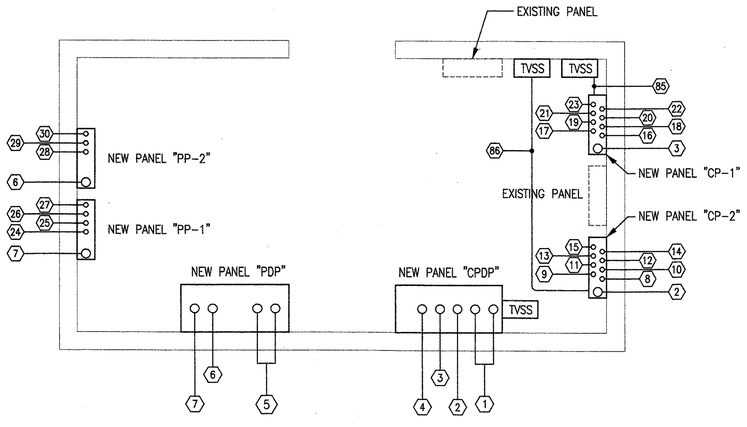
NOTE:

THESE RECORD DRAWINGS DESCRIBE THE INSTALLATION OF THE LAN EQUIPMENT, i.e.: CONDUITS, CABLES, CIRCUITS, SWITCHES, PANELS, OUTLETS, PENETRATIONS, ETC., AT THE SITE PERFORMED UNDER THE YEAR 2 BUILD SCOPE OF WORK. THE BACKGROUND DRAWINGS AND INFORMATION ON WHICH THEY ARE BASED ARE BELIEVED ACCURATE, BUT SHOULD NOT BE USED FOR ANY NEW CONSTRUCTION OR DESIGN WITHOUT FURTHER FIELD VERIFICATION.



1 ROOM 220 ENLARGED PLAN — 1/4" = 1' – 0" — NORTH



2 ELECTRICAL ROOM ENLARGED PLAN — 1/2" = 1' – 0" — NORTH

SYMBOL LIST

- W – STUDENT STATION
- P – PRINTER STATION
- T – TEACHER STATION
- TV – MMTV OUTLET
- CCE – CLASSROOM CONCENTRATOR ENCLOSURE
- LCE – LABORATORY CONCENTRATOR ENCLOSURE
- ACE – ADMINISTRATIVE CONCENTRATOR ENCLOSURE
- TVSS – TRANSIENT VOLTAGE SURGE SUPPRESSOR
- – DUPLEX RECEPTACLE – NEMA 5–20R GROUNDING – 120V, 1P
- – DOUBLE DUPLEX RECEPTACLE
- – AIR CONDITIONING UNIT RECEPTACLE – 30A, 2P, 250V
- K – KRONOS TIMEKEEPING SYSTEM
- K$ – TWO POLE 20 AMP 277/120V KEYED TOGGLE SWITCH
- – CIRCUIT BREAKER PANELBOARD
- V4000 WIREMOLD – NEW
- V3000 WIREMOLD – NEW
- V4000 WIREMOLD – EXISTING
- CONDUIT RISER UP
- CONDUIT RISER UP
- EXPOSED CONDUIT
- CONCEALED CONDUIT

(P)=PHASE, (N)=NEUTRAL, (IG)=ISOLATED GROUND, (EG)=EQUIPMENT GROUND, J.B.= JUNCTION BOX

NOTE:

THESE RECORD DRAWINGS DESCRIBE THE INSTALLATION OF THE LAN EQUIPMENT, i.e.: CONDUITS, CABLES, CIRCUITS, SWITCHES, PANELS, OUTLETS, PENETRATIONS, ETC., AT THE SITE PERFORMED UNDER THE YEAR 2 BUILD SCOPE OF WORK. THE BACKGROUND DRAWINGS AND INFORMATION ON WHICH THEY ARE BASED ARE BELIEVED ACCURATE, BUT SHOULD NOT BE USED FOR ANY NEW CONSTRUCTION OR DESIGN WITHOUT FURTHER FIELD VERIFICATION.

NOTES:
1. PROVIDE SUPPLY AND RETURN GRILLE KIT WITH 1"-20% FILTER FOR 2'x4' GRID.
2. PROVIDE INTEGRAL CONTROLS WITH WALL STAT. PLUS DRY CONTACT FOR BAS ALARM MONITORING.
3. PROVIDE REFRIGERANT RELIEF VALVE & PIPE DISCHARGE TO OUTSIDE (1" PIPE).
4. PROVIDE CONDENSATE DRAIN AS REQUIRED.
5. PROVIDE CONTROLLER W/STARTER.
6. PROVIDE 3/8"ø ROD SUPPORT FROM CONCRETE SLAB ABOVE WITH VIBRATION ISOLATOR & UNIT-STRUT FRAME AS REQUIRED.
7. PROVIDE CUT-OUT IN EXISTING CEILING & PATCH AROUND UNIT TO MATCH EXISTING.
